

AI-Powered Data Preparation

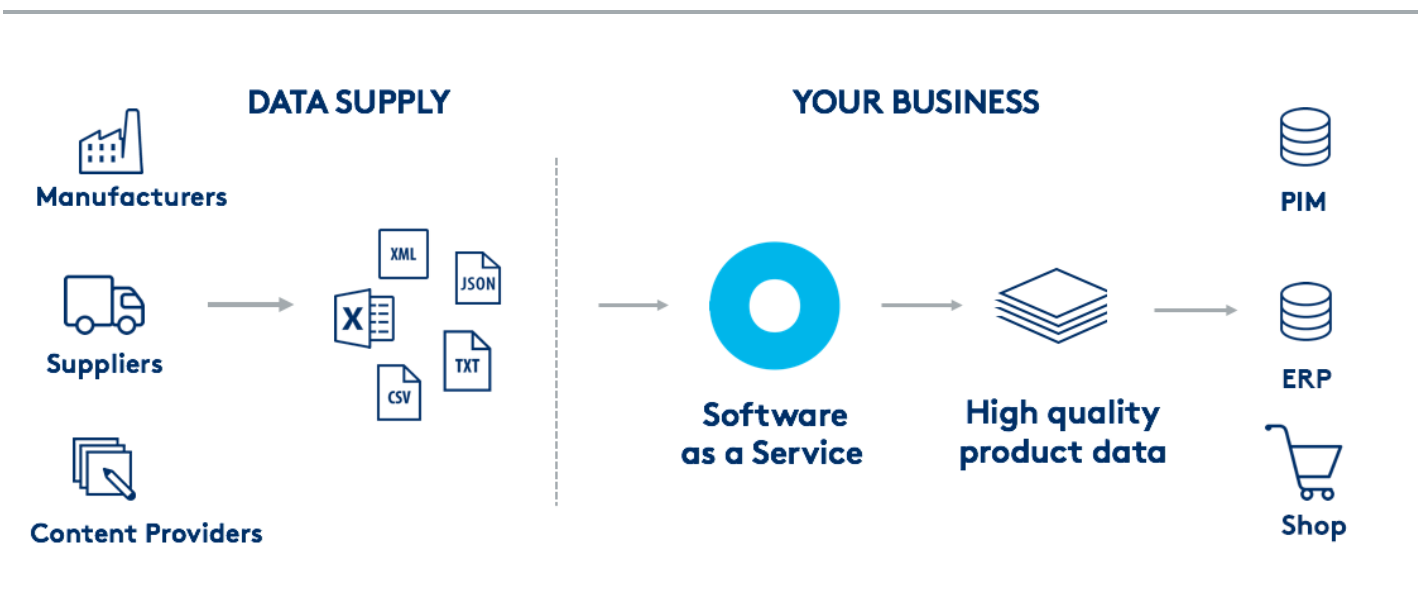

Data Sheet

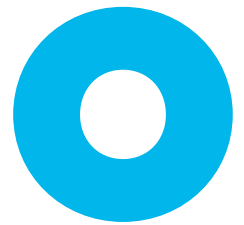

onedot
consumable data.

Onedot's artificial intelligence (AI)-powered software enables retailers, e-commerce and online market places to onboard new suppliers 10x faster, integrate 100,000 products overnight and reduce manual work in product data management by 8x. Onedot makes this possible by automating product data integration, transformation and categorisation and radically improving data quality.

Onedot's Software as a Service (SaaS) features a user-friendly web interface designed for non-technical users. Unlike traditional rule-based ETL or scripting tools, Onedot is a 'plug-and-play' system that continuously learns from business expert feedback and adapts to constantly changing data formats, structures, and nomenclatures.

PIM: Product Information Management / ERP: Enterprise Resource Planning

Why use Onedot

- Integrate new products independent of attribute names.
- Combine different data records without the need for a primary key.
- Adapt supplier data to your conventions, formats and styles.
- Extract additional attributes from product names and descriptions.
- Group products according to your classifications and dynamic groups.
- Identify product variants across categories and product groups.

Technical Features

- Cloud-based Software-as-a-Service (SaaS).
- Supported data formats: XLS, CSV, XML, TXT, JSON.
- Supported data sources: All major PIM/PCM systems, all JDBC/ODBC sources, various NoSQL databases, Hadoop, S3, etc.
- Upload data via Web application or RESTful Web API.
- Upload limits: 5 GB via Web application, 5TB through Web API.
- End-to-end AES256 encryption for highest data security standards.
- Enterprise-grade identity management supporting single-sign on (SSO), user federation, identity brokering, social logins, OpenID Connect, OAuth 2.0, SAML 2.0 and Kerberos protocols.
- Extremely scalable due to in-memory data processing technology.

Benefits for You

- Onboard new suppliers 10x faster by automating the entire product data intake.
- Speed up time-to-market by reducing time spent on preparing or updating product catalogues.
- Scale up product data management by using cutting-edge artificial intelligence (AI) technology to integrate, transform and categorise large numbers of data sources faster and more accurately.
- Reduce manual work by 8x for category managers and IT staff by automating routine product data activities.

Pricing

Pricing is determined by the following factors to give you maximum flexibility and control over costs:

- Feature scope (integrate, transform, categorise).
- Data volume (live products/SKUs).
- Number of suppliers.
